1.1 COMPANY PROFILE

Motovario® corporate philosophy aims to promote the company's brand and products at an international level with determination and transparency, while constantly striving to offer innovative solutions for satisfying and anticipating the demand of the market. Motovario® provides technologically advanced solutions in the transmission components field for industrial and civil applications worldwide.

The company

At Formigine, the heart of Modena's industrial district, Motovario® boasts a production plant spanning 50,000 m² that employs 500 people.

1965 Foundation of Motovario
 1998 Acquisition of Spaggiari Trasmissioni, an important brand in the mechanical technology sector.
 2006 Motovario acquisition by a private investment fund managed by Synergo SGR, in order to guarantee its development and support its expansion throughout the world.
 2014 Acquisition of Pujol.
 2015 Acquisition by TECO.

At the core of Motovario® lies an evolved production process based on technological solutions that convert power into movement. Motovario® is at the heart of the production processes that drive industries worldwide. Quality and reliability are the company's fundamental assets. Motovario® is present throughout the world with branches in France, Spain, Germany, England, China, the United States and India. The sales network and customer service guarantee immediate and high-quality support to all customers. In addition, the company boasts a worldwide network of MAC (Motovario Assembly Centre). Qualified assembly centres are present, in Italy, Australia, Benelux, Bulgaria, China, Finland, France, India, Ireland, Israel, Malaysia, Poland, Portugal, South Korea, Spain, Sweden, Turkey, United Kingdom, Ukraine and USA. The company is able to offer a wide range of products: speed variators, right-angle, helical-bevel, shaft-mounted, worm gear reducers and gearmotors, electric motors, inverter and inverter drives. Maximum quality and precision are ensured by the cutting-edge technologies implemented in the production process. 170 numerical control machines, served by LGV lines for storage in automatic warehouses, ensure a high standard of efficiency for the Motovario® production department.

The highly automated assembly lines are supported by a specific computerised system. The process statistical control system manages the production process to avoid rejects, by enabling the operator to monitor all the processing phases. The annealing, tempering, hardening and carburizing treatments are carried out inside the plant. The plant operates on a 24-hour basis, including holidays. Reliability, resilience and versatility are the distinctive features of Motovario® products, the most qualified solution to any power transmission requirement.

Main fields OF APPLICATIONS

- Mechanical-electromechanical industry (car washing, pumps, barriers & automatic doors, circuit breakers)
- Ceramic industry (ovens, press feeding systems)
- Food, farming, oenology industry
- Wood, marble, glass industry
- Packaging & bottling industry
- Textile, shoes, leather industry
- Transport, logistic industry
- Construction industry
- Milling, animal husbandry, flower industry
- Machine tools & steel industry
- Mining, quarry, cement industry
- Energy industry (solar, nuclear, biomass, wind)
- Amusement industry (theatres, leisure parks, kiddy rides)
- Chemical & pharmaceuticals industry
- Paper & printing industry
- Plastic & rubber industry
- Telecommunications industry (satellite orientation systems, military radar)
- Engineering and consultant companies

1.1 COMPANY PROFILE

Certifications

Our products can be manufactured to conform with the ATEX Directive 2014/34/UE. In addition, the safety and quality of our motors, geared motors and motovariators is guaranteed by the EAC (EurAsian Conformity) certification, an essential requirement for products exported to the Russian Federation. Our motors are UL certified, which guarantees their safety and quality requirements for the North American market.

Quality CONCEPT

Motovario® has obtained the quality certification renewal of its production system in conformity to the UNI EN ISO 9001:2008 standard. This internationally recognised certification acknowledges the company's commitment and drive geared towards constantly improving products, projects and services offered. Moreover, the company has obtained the OHSAS 18001:1999 (Occupational Health and Safety Assessment Series) certification, which defines the requirements of the workplace safety and health management system.

Research & DEVELOPMENT

Technological innovation: a crucial factor for competing in the market. In the company's 50-year history, research and change have been the pivotal factors in guaranteeing competitiveness at a global level, thanks to increasingly advanced products in terms of performance and reliability. Each year the company invests an increasing amount of its turnover in research and development, geared towards promoting the constant study and analysis of products, control processes and performance certification. In order to ensure that customers receive products that comply with the requested performance levels, the company carries out simulations on all new products, including NVH (Noise, Vibration, Harshness) tests effected in the advanced semi-anechoic chamber.

Customer CARE

Innovative instruments and software applications supporting the technical and logistic requirements of our partners worldwide guarantee a timely and customised service. The experience acquired by Motovario® has led to the creation of the new online portal MyMotovario 4.0, which allows for selecting products and exporting their 3D file. As a result, designers and engineering departments can download the three-dimensional model of the requested product and implement it directly in their own layout. In order to maximise customer service and quality, Motovario® offers all its customers the following online services: Order Tracking, which allows for monitoring the progress of an order in real time, and the Stock Availability service, through which users may check the availability (stock) of our products, both in the Italian plant and in the various branches.

Motovario chooses technological evolution.

Motovario® has chosen technological evolution and actively collaborates with the Faculty of Engineering of the University of Modena and Reggio Emilia and of the University of Bologna.

Reliability, sturdiness, versatility

These are the distinctive traits of Motovario products. A broad range of transmission products that provide a competent, innovative solution to each and every power application need. Cutting-edge tools, unrelenting research efforts and ongoing commitment to upgrading manufacturing equipment to the latest state-of-the-art enable us to offer high quality and performance standards to cater to industry requirements and the broadest variety of applications. Motovario ranks among the leading, well-reputed companies in Italy engaged in the design, manufacture and sales of transmission products for industrial and civil applications. The entire manufacturing process takes place in Formigine and Ubersetto plants, in Modena area, with an overall surface area of over 50.000 sq m. and a workforce of about 500 people. 170 numerically controlled machines and cutting-edge handling, storage and assembly automated systems ensure that all products meet high quality standards. The network includes more than 40 Motovario-certified assembly centres, with the capability to supply products in a broad range of versions, including customised versions, high service capacity and fast response. As a result, our product offering can cater to the needs of all plant engineering sectors, in all industries and for different applications, and includes: speed variators, helical, bevel-helical, parallel helical, worm gear reducers and gearmotors, electric motors and motor-inverters. All of the products we manufacture share such common features as reliability, sturdiness and versatility, topped with a high innovation content. At the heart of a company's technological innovation is the ability to develop integrated tools for computer-aided calculation simulation and management of different processes as part of product development. When simulating operating, setup and process conditions, it is also necessary to analyse and optimize the overall functional design of a product using a synergistic approach. This is achieved by implementing an exhaustive experimental plan, without using interpolation or approximation, as they frequently allow criticalities or any oversizing which is not conducive to maximising quality/cost ratio to go unnoticed.

High-efficiency method for calculation according to standards

A set of specific functions have been developed to this end. A few significant examples include functions to:

- Optimise individual reduction ratios and the combinations of the different reduction stages based on parametrisable target normal series;
- Calculate torque values and maximum permissible external forces for gear reducer units, using iterative numeric algorithms to confirm target life/safety values of components;
- Create databases for loading a FEM structural analysis model by automatically writing all reaction components of bearings under all load conditions to a specific file, with automatic selection of critical cases that need to be verified.

Another goal of the method is to create synergy between calculation according to standards and FEM structural calculation and the implementation of FEM model loading procedures, so as to simplify input data, meshing and constraint criteria

Competitiveness and operational benefits of the new method

This method offers many practical advantages over traditional calculation procedures within the company, namely:

- Iterative optimisation of project since setup stage;
- Accurate assessment of the various service factors and reliability levels for the entire gear reducer unit and for all operating conditions as per catalogue rating or customer specific requirements;
- Faster support to customers in analysing tailored product configurations;
- Integrated corporate databases that can be updated in real-time.

Range extension and ongoing evolution

The steady, significant growth of Motovario Group is achieved thanks to an ongoing search for new calculation and design tools, as well as to customer service. The new tools identified have led to innovation, improved product reliability as well as positive developments in market management. The following software products are used for design, calculation and management:

- Solidworks;
- Kisssoft;
- Kissys;
- Ansys;
- FEM modelling analysis software;
- Circuit design and simulation software;
- Specific spreadsheets;
- SAP.

In MyMotovario 4.0 portal, PRODUCT SELECTION includes a section named APPLICATIONS where customers can enter application data and find out which gear reducer suits them best in a matter of minutes.

1.2 PRODUCTS AND SOFTWARE MOTOVARIO

TECHNICAL CATALOGUE

MOTOVARIO Products

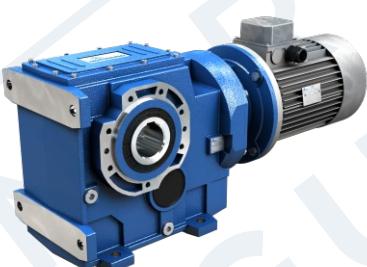

HELICAL GEAR REDUCERS

Cast iron or aluminum casing
Output shaft up to 90 mm
 M_n up to 8.600 Nm
Reduction stages 1, 2, 3
Ratios up to 354
Atex units

HELICAL BEVEL GEAR REDUCERS

Cast iron or aluminum casing
Output shaft up to 110 mm
 M_n up to 14.000 Nm
Reduction stages 2, 3
Ratios up to 443
Atex units

SHAFT MOUNTED GEAR REDUCERS

Cast iron
Output shaft up to 90 mm
 M_n up to 10.250 Nm
Reduction stages 2, 3
Ratios up to 395
Atex units

WORM GEAR REDUCERS

Cast iron or aluminum casing
Output shaft up to 50 mm
 M_n up to 2.700 Nm
Ratios up to 1083
Atex units

PLANETARY GEARED UNITS

Cast iron
Output shaft up to 80 mm
 M_n up to 10000 Nm
Reduction stages 1, 2, 3, 4
Ratios up to 2700

1.3 SYMBOLS AND FORMULAS

TECHNICAL CATALOGUE

1.3.2 Formulas

REDUCER		
Starting or stopping time	$t = v / a$	[s]
Velocity in rotary motion	$v = \pi * d * n / 60$ $v = \omega * r$	[m/s]
Speed velocity Angular velocity	$n = 60 * v / (\pi * d)$ $\omega = v / r$	[rpm] [rad/s]
Acceleration or deceleration according to a starting / stopping time	$a = v / t$	[m/s ²]
Angular acceleration	$\alpha = n / (9,55 * t)$ $\alpha = \omega / t$	[rad/s ²]
Starting or stopping distance (according to acceleration / deceleration or angular velocity)	$s = a * t^2 / 2$ $s = v * t / 2$	[m]
Horizontal translation force	$F = \mu * m * g$	[N]
Vertical translation force (lifting)	$F = m * g$	
Inclined plane translation force	$F = m * g (\mu * \cos\beta + \sin\beta)$	
m = mass [kg]; g = gravity acceleration [m/s ²]; μ = friction coefficient; β = angle of inclination		
Moment of inertia	$J = m * v^2 / \omega^2$	[kgm ²]
Torque	$M = F * d / 2$ $M = J * \omega / t$	[Nm]

MOTOR and GEARMOTOR		
Starting time	$ta = (J_{ext} + J_m) * n_n / 9,55 + (M_{peak} - Mr)$	[s]
Braking time	$ts = (J_{ext} + J_m) * n_n / 9,55 + (M_{peak} + Mr)$	[s]
Motor rotation angle during starting	$\phi = n_n * ta / 19,1$	[rad]
Motor rotation angle during braking	$\phi = n_n * ts / 19,1$	[rad]
Power available at the shaft of single phase motor	$P = V * I * \eta * \cos\omega$	[W]
Power available at the shaft of three phase motor	$P = 1,73 * V * I * \eta * \cos\omega$	[W]

RUNNING at 60Hz		
Speed velocity at 60Hz	$n_{60Hz} = 1,2 * n_{50Hz}$	[rpm]
Power at 60Hz	$P_{160Hz} = P_{150Hz} * V_{60Hz} / V_{50Hz}$	[kW]
If input voltage at 60 Hz (V_{60Hz}) corresponds to winding voltage at 50 Hz (V_{50Hz}), power doesn't change $P_{160Hz} = P_{150Hz}$		
If input voltage at 60 Hz (V_{60Hz}) is 20% higher than winding voltage at 50 Hz (V_{50Hz}), power increases by 20% $P_{160Hz} = 1,2 P_{150Hz}$		
Torque at 60Hz	$M_{60Hz} = M_{50Hz} * P_{160Hz} / (1,2 * P_{150Hz})$	[Nm]
Service factor at 60Hz	$f.s_{60Hz} = f.s_{50Hz} * 1,175 * P_{150Hz} / P_{160Hz}$	-

1.4 PRODUCT SELECTION

For correctly selecting a gear reducer or geared motor, several essential pieces of data are required:

1. The rotational input speed to the gear reducer (n_1) and the rotational output speed (n_2). Through these two values it is possible to calculate the reduction ratio (i) of the gear reducer using the following formula: $i=n_1/n_2$
2. The torque required by the application (M_{r2}).

The geared motor or gear reducer can be selected once this data is known.

This guide helps you to select the right product in just a few steps:

Geared motor selection

1. Determine the application's actual service factor ($s.f.$). This parameter depends on the type of load of the powered machine, the number of starts per hour and the hours of operation (refer to the "Service factor" paragraph).
2. Calculate the input power P_{r1} using the required torque value M_{r2} , the speed n_2 and dynamic efficiency value. $P_{r1}=(M_{r2}*n_2)/(9550*\eta_d)$. The dynamic efficiency value depends on the type of gear reducer and on the number of gear reduction stages. (To calculate the efficiency value see its page).
3. Consult the geared motor performance tables and identify a nominal power value P_{n1} exceeding the required power P_{r1} , such that: $P_{n1} \geq P_{r1}$
4. Once the suitable nominal power has been identified, select the geared motor capable of generating the rotational speed closest to the desired n_2 value and with service factor s.f. greater or equal to that required by the application.

In the geared motor selection tables the combinations include 2-pole, 4-pole and 6-pole motors powered at 50Hz.

Gear reducer selection

1. Determine the application's service factor (f_s) (consult to the "Service factor" paragraph on its page).
2. Calculate the reduction ratio i from the requested output speed n_2 and from the input speed n_1 . $i=n_1/n_2$
3. Calculate the torque M_{c2} for selecting the gear reducer through the torque required by the application M_{r2} and the service factor s.f.: $M_{c2}=M_{r2}*(f_s)$
4. Consult the Gear Reducer Performance tables looking for the reducer that, with the reduction ratio closer to the calculated one, has a nominal torque M_{n2} so that: $M_{n2} \geq M_{c2}$

Checks

Once the gear reducer or geared motor has been selected, the following checks should be performed:

A. Thermal power

The gear reducer's thermal power must be equal to or greater than the installed mechanical power, or the power required by the application according to the indications contained in the section (refer to the "Thermal power" paragraph).

B. Maximum torque

M ₂ max [Nm]									
HPL 010		HPL 020		HPL 030		HPL 050		HPL 080	
CS-SS-HS	HM	CS-SS-HS	HM	CS-SS-HS	HM	CS-SS-HS	HM	CS-SS-HS	HM
2400	2400	3400	2400	5200	5200	8800	7500	14900	11100

C. Radial loads

1. Verify that the radial loads acting on the input and/or output shafts are within with the values indicated in the catalogue. If they exceed these values, increase the size of the gear reducer or modify the external load capacity. During the checking phase, it is important to remember that the values indicated in the catalogue refer to loads acting on the mid-point of the shaft protrusion, therefore, if the load is applied to a different position, appropriate formulas must be used to calculate the admissible load in the desired position (refer to the "Radial loads" paragraph).
2. If accessory output shafts are present, make sure that the applied load is compatible with shaft size. If help is needed: contact MOTOVARIO TECHNICAL SERVICE.
- D. If an electric motor is going to be fitted to the selected gear reducer, check for its applicability by referring to the configuration table (see paragraph "Motor flange availability"). From IEC 180 motors, verify if necessary to support the motor with feet. In case of need please contact MOTOVARIO TECHNICAL SERVICE.

1.5.1 Service factor

The service factor required by application is defined by this formula $f_s = f_{sa} * f_{sb} * f_{sc}$ (see relevant tables). It takes into account how heavy-duty the application is; it depends on operating conditions, inverter type and frequency of gear reducer starts. The service factor of a gear reducer is calculated by dividing its nominal power Pn1 by installed power P1. The parameters that need to be taken into account in order to select the most suitable service factor are reported in tables **f_{sa}**, **f_{sb}** and **f_{sc}**.

Table f_{sa}

Nature of load applied	Daily operating hours [h/d]				
	2	4	8	16	24
Even	0,80	0,90	1,00	1,25	1,35
Moderate	1,00	1,20	1,30	1,60	1,80
Heavy	1,30	1,60	1,80	2,25	2,50

Table f_{sb}

Nature of load applied	Frequency of starts per hour [st/h]			
	< 6	6 ... 20	20 ... 60	60 ... 120
Even	1	1,25	1,35	1,5
Moderate	1	1,15	1,25	1,35
Heavy	1	1,05	1,15	1,25

Table f_{sc}

Type of motor used	f _{sc}
Electric motor	1,00
Reciprocating multiple-cylinder motor	1,25
Reciprocating single-cylinder motor	1,50

Application	Type of load
WOOD WORKING	
Debarkers	Heavy

Application	Type of load
EXTRACTORS AND DREDGERS	
Rope winders	Moderate
Rail-mounted conveyors	Moderate
Pumps	Moderate
Stackers	Moderate
Material hoisting	Moderate
Bucket extractors	Heavy
Application	Type of load
METAL-WORKING	
Drawbenches	Heavy
Forging presses	Heavy
Cutting machines	Heavy
Rolling mills	Heavy
Application	Type of load
MIXERS	
Steady-density	Uniform
Variable-density	Moderate
For concrete	Moderate
Application	Type of load
ELEVATORS	
Hoists	Moderate
Lifts, ski lifts (cableways)	Heavy
Application	Type of load
WASHING MACHINES AND PUMPS	
	Moderate
Application	Type of load
WATER TREATMENT	
Mud scraper machines	Moderate
Machines thickeners	Uniform
Sedimentation machines	Moderate
Machines digesters	Moderate
Machines augers	Moderate

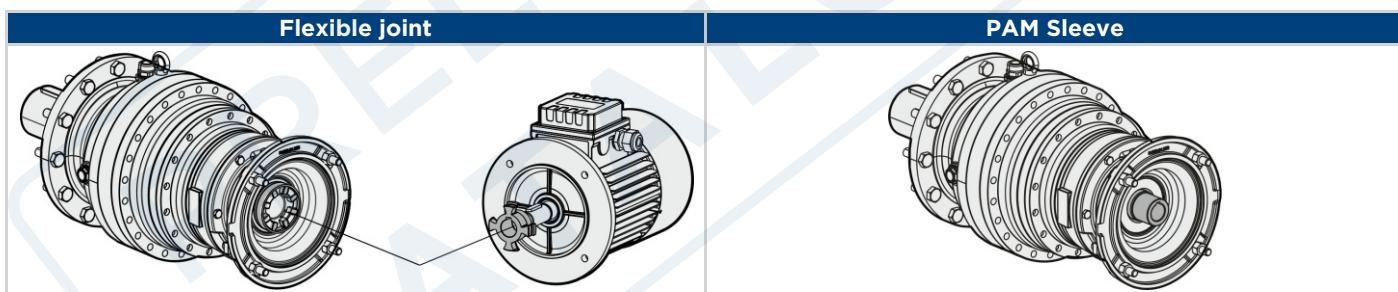

1.6.1 Installation

To install the gear reducer it is necessary to note the following recommendations:

- Check the correct direction of rotation of the gear reducer output shaft before fitting the unit to the machine.
- In the case of particularly lengthy periods of storage (4/6 months), if the oil seal is not immersed in the lubricant inside the unit, it is recommended to change it since the rubber could stick to the shaft or may even have lost the elasticity it needs to function properly.
- Whenever possible, protect the gear reducer against solar radiation and bad weather.
- Ensure the motor cools correctly by ensuring good passage of air from the fan side.
- In the case of ambient temperatures < -15°C or > +50°C call MOTOVARIO TECHNICAL SERVICE.
- The various parts (pulleys, gear wheels, couplings, shafts, etc.) must be mounted on the solid or hollow shafts using special threaded holes or other systems that anyhow ensure correct operation without risking damage to the bearings or external parts of the units. Lubricate the surfaces in contact to avoid seizure or oxidation.
- Painting must definitely not go over rubber parts and the holes on the breather plugs, if any.
- Replace the closed plug used for shipping with the special breather plug.
- Choose the most appropriate lubricant (see Lubrication chapter) and fill the gear reducer properly using the appropriate oil level plug.
- Starting must take place gradually, without immediately applying the maximum load.
- When there are parts, objects or materials under the motor drive that can be damaged by even limited spillage of oil, special protection should be fitted.

Assembling motor on pam flange

When the unit is supplied without motor, it is necessary to follow these recommendation to ensure the correct assembly of the electric motor. Check that the tolerances for the motor shaft and flange correspond to the "standard". Carefully clean the shaft, spigot and surfaces of the flange removing traces of paint and dirt, and confirm the key is fitted correctly. Fit the half coupling/sleeve to the motor shaft (see picture) taking care to ensure the motor shaft and bearings are not damaged by avoiding excessive force and where necessary using assembly equipment. Place the couplings elastic element onto the motor half coupling and position the motor up to the gear unit ensuring the coupling element is aligned with the driven half coupling. Complete the assembly using the fixing bolts. Key-ways with tightened tolerances.

2.1 DESIGN FEATURES

MOTOVARIO products are supplied with the following surface treatment characteristics:

External worm wheel in nitrided steel

Sun and planetary gears in case-hardened steel

High-resistance spheroidal cast-iron struts

Connection rings and planet-carriers in ductile iron or structural steel, depending on the size of the gear reducer

Versions available (output modules):

- Version for flange fastening;
- Root-mounting version, integral.

High-resistance spheroidal cast-iron output module housings:

- The castings are supplied protected by an antirust primer, in Black-Grey RAL 7021.

Input versions available:

- PAM flange for coupling with IEC motor;
- PAM flange for coupling with IEC motor with coupling;
- Compact gear motor;
- Input shaft.

Performance:

- Loading capacity verifiable in accordance with DIN 3990, ISO 6336, AGMA 2101, ISO 10300, DIN 3991, ISO 281, DIN 743.

Dynamic η :

- The efficiency is the ratio between the output power P_2 and the power absorbed by the gear reducer P_1 : $\eta = P_2/P_1$.

HPL-range helical gear reducers have an average value equal to:

HPL..1 stages = 0,97

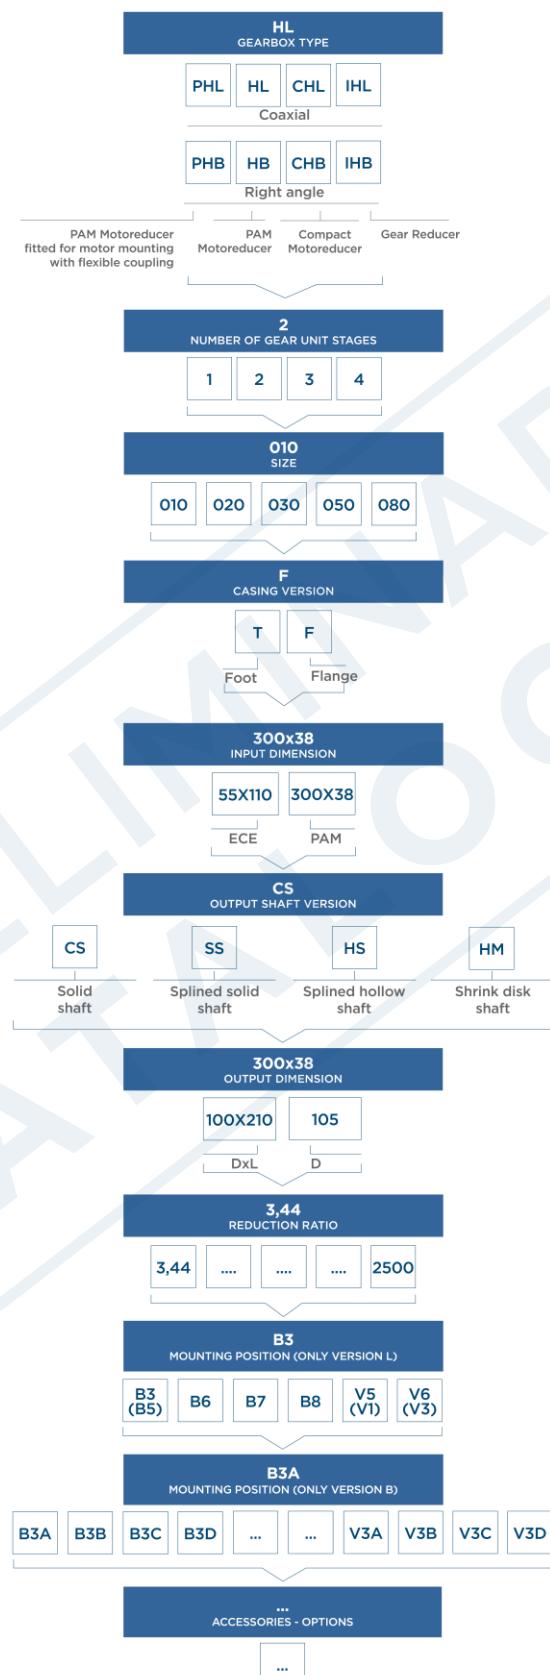

HPL..2 stages = 0,94

HPL..3 stages = 0,91

HPL..4 stages = 0,88

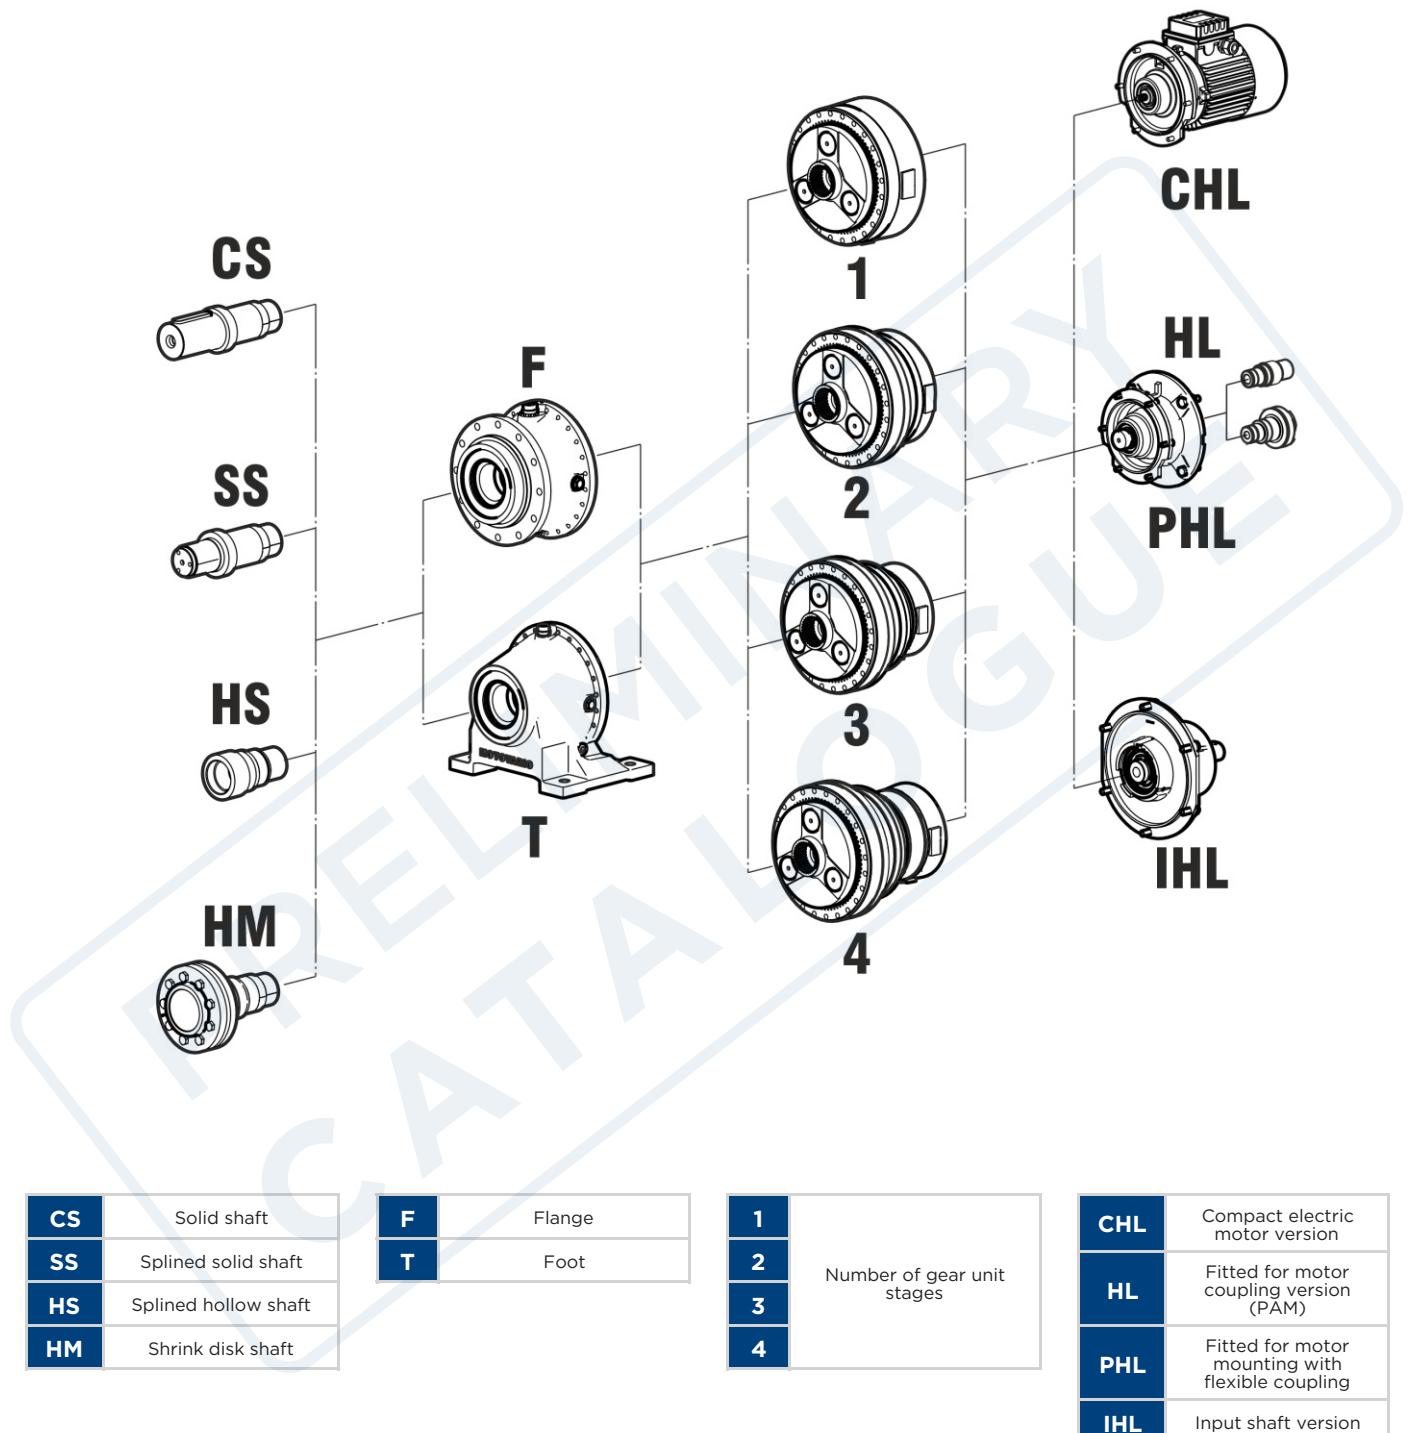

2.2 TYPOLOGY

2.2.1 Designation

2.2 TYPOLOGY

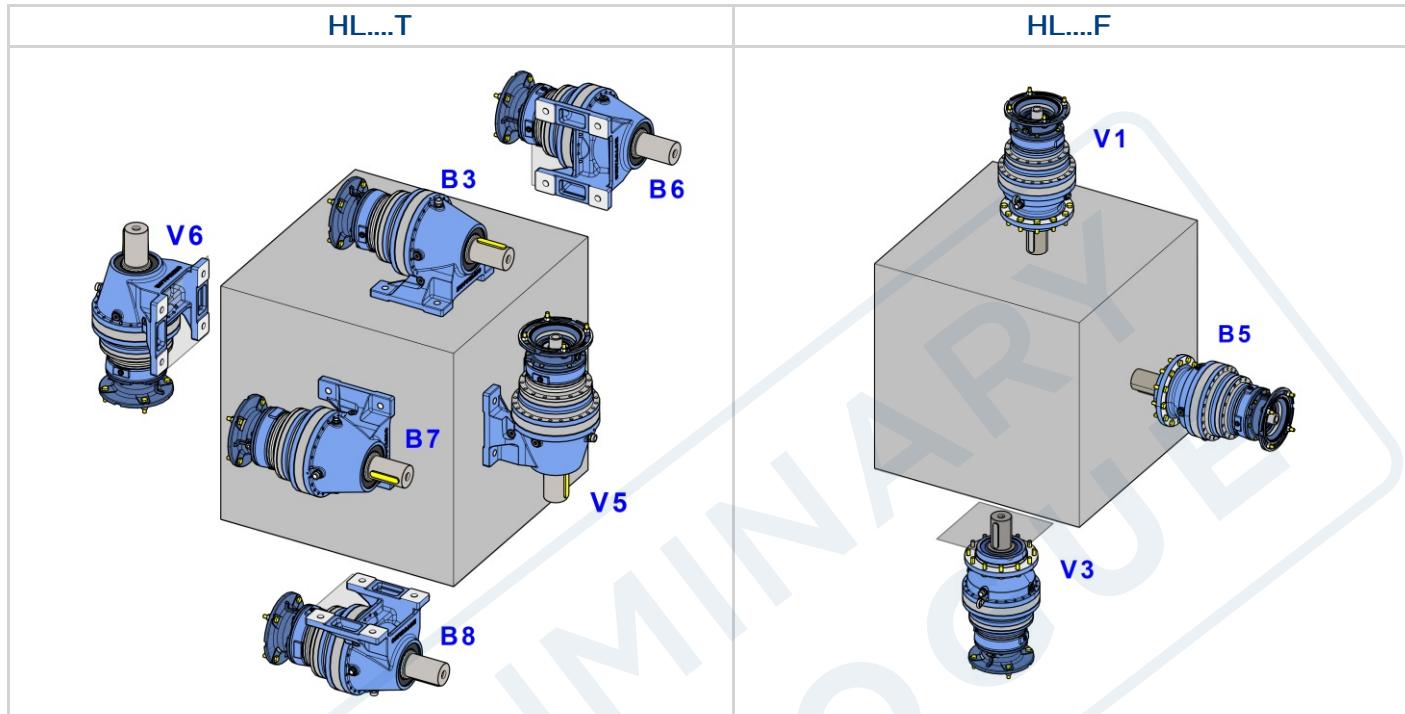

2.2.2 Versions

2.3 MOUNTING POSITIONS

2.3.1 Mounting positions

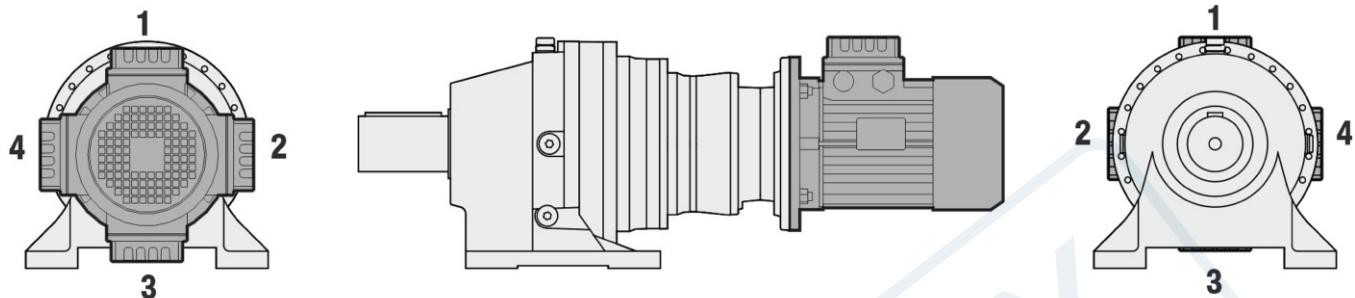

The mounting position of the gear unit identifies its space orientation. B3 mounting position, as from a technical point of view, ensures lower oil splash, better lubrication and less heating.

2.3 MOUNTING POSITIONS

2.3.2 Position of terminal box

Unless otherwise specified when ordering, the gear reducer is supplied with terminal box in position 1.

PRELIMINARY
CATALOGUE

2.4.1 Information

The scheme below indicates the nominal thermal power P_{th} capacity [kW] according to the following conditions:

- mounting position B3
- continuous operation at input speed ≤ 1500 rpm
- environment temperature $T_{amb}=25^{\circ}\text{C}$
- sea level altitude
- air speed around the gear reducer $\geq 1\text{m/s}$
- absence of external radial and/or axial loads

$n_i = 1500\text{rpm}$							
	$P_{th} [\text{kW}]$		$P_{th} [\text{kW}]$		$P_{th} [\text{kW}]$		$P_{th} [\text{kW}]$
HPL 1-010	7,5	HPL 2-010	6,5	HPL 3-010	5,5	HPL 4-010	4
HPL 1-020	8	HPL 2-020	7	HPL 3-020	6	HPL 4-020	5
HPL 1-030	12	HPL 2-030	8	HPL 3-030	7	HPL 4-030	6
HPL 1-050	14	HPL 2-050	9	HPL 3-050	8	HPL 4-050	7
HPL 1-080	18	HPL 2-080	14	HPL 3-080	10	HPL 4-080	9

A correct lubrication and a proper running condition of the gearbox are guaranteed only applying an input power not exceeding P_{th} (at the above reference conditions)($T_{oil\ max}=95^{\circ}\text{C}$).

2.4.2 Verification

Verification of the application

Except for continuous operating times below two hours and successive pauses capable of bringing the gear reducer back to ambient temperature, for each application it is peremptory to verify the gear reducer's thermal limit according to the following formula:

$P_1 < P_{th} * f_{ta} * f_{tc} * f_{tn} * f_{tv}$, where:

- P_1 = installed power [kW]
- P_{th} = thermal capacity under reference conditions [kW] (see table "Nominal thermal capacity");
- f_{ta} = sea-level elevation correction factor (see table);
- f_{tc} = ambient and operating temperature correction factor (see table);
- f_{tn} = input speed n1 correction factor;
- f_{tv} = airflow speed correction factor around the gear reducer (see table).

Correction factors reflect operating conditions other than the reference conditions and are obtained from the following ISO14179 tables:

f _{tn}	n1 [rpm]							
	500	700	900	1150	1400	1750	2250	2800
B3/B5 - B8 - B6 - B7	1,73	1,41	1,3	1,16	1	0,81	0,65	0,5
V5/V1 - V6/V3	1,3	1,16	1	0,81	0,65	0,5	0,4	0,25

Table f_{ta}

Sea-level elevation correction factor

Altitude [m]	f _{ta}
0 - 1000	1
1000 - 2000	0,9
2000 - 3000	0,8
> 3000	*

Table f_{tc}

Ambient and operating temperature correction factor

F _c	% Duty per hour of operation				
	100	80	70	40	20
10	1,21	1,28	1,40	1,64	2,19
20	1,07	1,13	1,23	1,45	1,93
25	1,00	1,05	1,15	1,35	1,80
30	0,93	0,98	1,07	1,25	1,67
40	0,79	0,83	0,90	1,06	1,41
45	0,71	0,75	0,82	0,96	1,29
50	0,64	0,68	0,74	0,87	1,16

Table f_{tn}

Input speed n1 correction factor

f _{tn}	n1 [rpm]							
	500	700	900	1150	1400	1750	2250	2800
B3/B5	1,73	1,41	1,3	1,16	1	0,81	0,65	0,5
B6 - B7								
B8								
V5/V1	1,3	1,16	1	0,81	0,65	0,5	0,4	0,25
V6/V3								

Table f_{tv}

Airflow speed correction factor around the gear reducer

Ventilation correction factor	f _{tv}
Stagnant air (<0,5 m/s)	0,75
Indoor installation with slight ventilation	1
Indoor installation with good ventilation (>1,4 m/s)	1,4
Outdoor installation (>3,7 m/s)	1,9

* Please contact MOTOVARIO TECHNICAL SERVICE.

In case of operation at input speeds exceeding 1800 rpm, or ambient temperatures greater than 40°C, please contact MOTOVARIO TECHNICAL SERVICE.

2.5 CRITICAL APPLICATIONS

TECHNICAL CATALOGUE

2.5.1 Critical applications

	HPL				
	010	020	030	050	080
n1 < 1800 rpm	✓	✓	✓	✓	✓
1800 rpm < n1 < 3000 rpm	B	B	B	B	B
n1 > 3000 rpm	A	A	A	A	A

	HPL				
	010	020	030	050	080
FS < 1,25	B3/B5-B6-B7-B8 : n2 < 0,5 rpm	A	A	A	A
	V5/V1 - V3/V6 : n2 < 0,3 rpm	A	A	A	A

✓ Verified application.

A Application not recommended.

B Check the application and/or call MOTOVARIO TECHNICAL SERVICE.

2.5.2 Information

The performance indicated in the catalogue correspond to position B3 or similar. For other mounting contexts and/or particular input and output speeds, please refer to the tables highlighting the main critical situations for each gear reducer size. It is also necessary to take due consideration of and carefully assess the following applications by contacting MOTOVARIO TECHNICAL ASSISTANCE:

- Use in services that could be hazardous for people if the gear reducer fails
- Use as a lifting winch.
- Use in places with Ambient T° below -15°C or over 50°C.
- Use in chemically-aggressive environments.
- Use in a brackish environments.
- Use in radioactive environments.
- Use in environments with pressures other than atmospheric pressure.
- Applications with especially high inertia.
- Applications with high dynamic strain on the casing of the gear reducer.
- Applications where even partial immersion of the gear reducer is required.
- Mounting positions not envisaged in the catalogue.

Pay particular attention in the following conditions:

- Avoid use as multiplier.
- Do not use in an environment with an explosive or potentially-explosive atmosphere.

In the presence of overloads due to starting at full load, braking, shocks or other static and dynamic causes, check that the peak torque is always lower than the maximum torque M_{2max} (see the table in the paragraph on Product Selection).

2.6 MOTOR FLANGE AVAILABILITY

TECHNICAL CATALOGUE

B11 = Compact electric motor versions.

These tables report all possible dimensions. Please verify service factor.

2.8 RADIAL LOAD

The value of the admissible radial load [N] is given in the tables relating to the performance of the gear reducer at issue. It is related to the load applied on the centre line of the shaft and in the most unfavourable conditions of angle of application and direction of rotation. The maximum admissible axial loads are 1/5 of the value of the given radial load when they are applied in combination with the radial load. The tables relating to the output shafts give the maximum admissible value. This value must never be exceeded since it relates to the strength of the case. Particular conditions of radial load higher than the limits of the catalogue may occur. In this case, call our Technical Service and provide details on the application: direction of the load, direction of rotation of the shaft, type of service. The radial load on the shaft is calculated with the following formula: $Fr_e = (2000 \cdot M \cdot f_z) / D \leq Fr_1 \text{ or } Fr_2$

- **Fr_e** [N] Resulting radial load
- **M** [Nm] Torque on the shaft
- **D** [mm] Diameter of the transmission member mounted on the shaft
- **Fr₁-Fr₂** [N] Value of the maximum admitted radial load (see relative tables)
- **f_z** = 1,1 gear pinion - 1,4 chain wheel - 1,7 v-pulley - 2,5 flat pulley

PRELIMINARY
CATALOGUE

2.9.1 Information

Proper lubrication makes for:

- Lower friction;
- Less heating;
- Increased efficiency;
- Lower oil temperature;
- Less wear.

In cases of ambient temperatures not envisaged in the table, please contact MOTOVARIO TECHNICAL SERVICE. In the case of temperatures under -30°C or over 60°C it is necessary to use oil seals with special properties. For operating ranges with temperatures under 0°C it is necessary to consider the following:

1. The motors need to be suitable for operation at the envisaged ambient temperature.
2. The power of the electric motor needs to be adequate for exceeding the higher starting torques required.
3. Pay attention to impact loads since cast iron may have problems of fragility at temperatures under -15°C.
4. During the early stages of service, problems of lubrication may arise due to the high level of viscosity taken on by the oil and so it is wise to have a few minutes of rotation under no load.

For the recommended oil change frequencies, please refer to the Product Use and Maintenance Manual.

2.9.2 Lubricants

MOTOVARIO epicycloidal gear reducers in Series HPL have been designed for oil bath lubrication. For placement in Position V6 and V3, with the vertical slow shaft going upwards, it is necessary to ensure lubrication via a suitably-sized oil expansion tank (see the DEVICES chapter).

The **HPL** reducers are supplied without lubricant, whilst the initial fill of lubricant can be requested as an option when ordering.

In the event of a request for a gear reducer supplied complete with lubricant, this is to be established by MOTOVARIO and can be seen on the Order Confirmation and on the plate.

If different lubricants and/or lubricants with temperature ranges other than those recommended by MOTOVARIO are utilised, the warranty shall be void, with the exception of any authorisations provided in accordance with the applications and granted in writing.

The lubricants listed in the table must not be interpreted as a guarantee of quality, given that they are supplied by the lubricant manufacturer who remains responsible for their product.

Do not mix different synthetic lubricants with each other or even with the minerals! Additionally, lubricants with the same viscosity class yet produced by different manufacturers do not bear the same characteristics.

Choose the lubricant only after having conducted the necessary thermal check of the gear reducer (see the Thermal Power paragraph).

Specifications of LUBRICANTS RECOMMENDED BY MOTOVARIO

	* Polyalphaolefin synthetic oil (PAO)	Mineral oil
ENI	BLASIA SX	BLASIA
SHELL	OMALA S4 GXV	OMALA S2 GX
KLUBER	Klubersynth GEM 4-...N	Kluboil GEM 1-...N
MOBIL	SHC GEAR	MOBILGEAR XMP
CASTROL	ALPHASYN T	ALPHA SP
BP	ENERSYN EPX	ENERGOL GR-XP
TOTAL	CARTER SH	CARTER EP
ESSO	SPARTAN S-EP	SPARTAN EP

* Recommended

Based on the output speed n_2 , check the oil type to be used in table ISO VISCOSITY GRADES, that provides the average kinematic speed value [cSt] at 40 °C.

Table ISO VISCOSITY GRADES

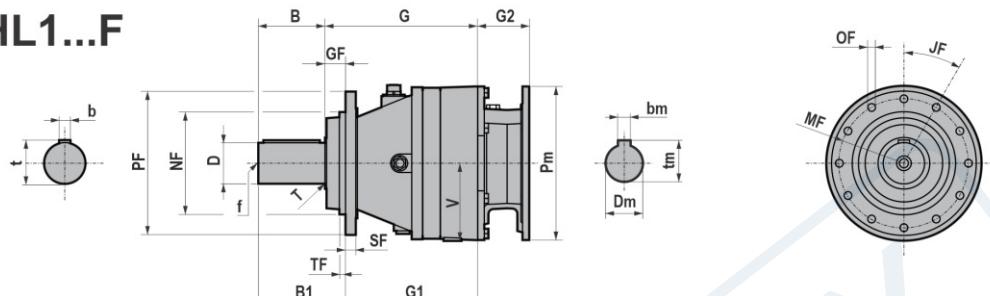

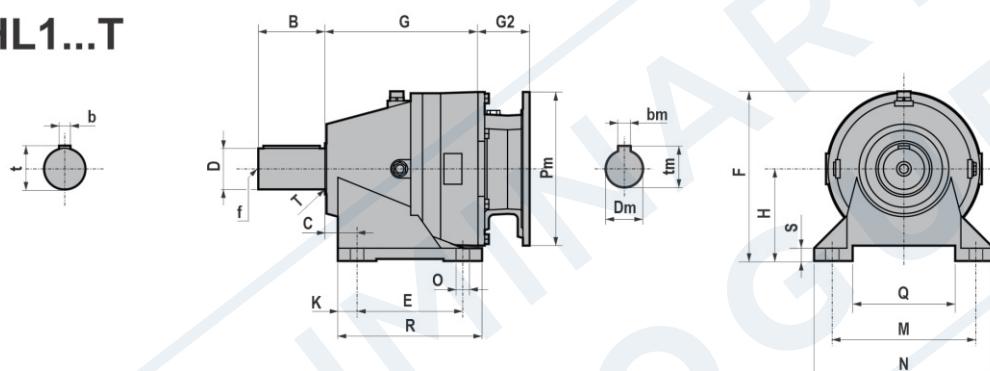

n_2 [rpm]	T_{amb} °C	
	Synthetic oil	Mineral oil
	(-15) ÷ (+50)	(-5) ÷ (+40)
> 150	220	220
150 ÷ 5	320	320
< 5	460	460

2.9.3 Special lubricants

If 'special' lubricant is required please contact MOTOVARIO TECHNICAL SERVICE.

3.4 ELECTRIC MOTORS

3.4.2 Standard high efficiency (TS), high (TH) and premium (TP) motors

Motovario, three-phase, single polarity motors are available in three different versions (IE1-IE2-IE3) in compliance with standard 60034-30-1. The efficiency value is calculated according to the method set forth in standard IEC 60034-2-1.

1. IE1: TS series (standard efficiency) for nominal power less than 0.12 kW;.
2. IE2: TH series (high efficiency) for nominal power greater than or equal to 0.12 kW and less than 0.75 kW;
3. IE3: TP series (premium efficiency) (*) 4 poles for nominal power greater than or equal to 0.12 kW, 2 and 6 poles for nominal power greater than or equal to 0.75 kW.

Table of Motovario commercial availability

NOMINAL POWER [kW]	EFFICIENCY LEVEL		
	IE1	IE2	IE3
Pn < 0,12	TS-TBS	-	-
0,12 ≤ Pn < 0,75	-	TH-TBH	TP-TBP (**)
Pn ≥ 0,75	-	-	TP-TBP

(*) Motor TP100LA4 2,2 kW and all TP 6 poles motors are available at 60Hz only upon request. As a consequence, these motors are in IE3 efficiency level at 50 Hz and IE2 at 60 Hz in case of bifrequency electrical design (standard 230/400-265/460V 50-60Hz and optional 200/346-220/380V 50-60Hz, 290/500-330/575V 50-60Hz and 400/690-460/800V 50-60Hz, see chapter on input voltage and frequency).

(**) Only 4 poles.
